Technical data

REMEMBER

When purchasing a RAPIDO, the unladen weight includes the weight of the vehicle's standard equipment. The unladen weight of motorhomes is determined in compliance with the laws currently in force and includes the vehicle in working order, the driver (75 kg), the gas bottle, fresh water (20 L) and fuel tanks up to 90 % of their capacity with a tolerance of +/- 5 %. All of our vehicles are certified in accordance with Regulation 1230/2012.

It is therefore the responsibility of the user to adjust the load and the number of passengers on board according to the permissible GCW, the payload and the weight of any additional equipment he installed or has had installed in the vehicle.

[B] The technically permissible towable mass of the motor vehicle is a piece of information associated with the type approval of the completed vehicle. Based on the towbar that will be mounted on the vehicle and specific values given by the manufacturer of the towbar and the tow ball, the maximum trailer mass that the vehicle can pull may be less. The characteristics of towbar and tow ball resistance (in particular values D and S) are engraved on a plate fixed on it. Value D allows to calculate the maximum permissible mass for the towbar (MPM) with the following calculation: $MPM = (D \times T \times 1000) / ((T \times 9,81) - (1000 \times D))$, with T = maximum vehicle mass (GVW) (in kg) and D = value (in kN) indicated on the towbar. The maximum trailer mass (in kg) is thus less than or equal to the MPM for a maximum towable mass of the vehicle that may be up to 2000 kg.
